Precalculus Peer Assisted Learning

December 5, 2024

*Solution Preface:*

I make no guarantee that these solutions are free of typos or errors. I have done my best to ensure they are all correct; however, you should always double-check my solutions with another resource if you are unsure whether they are accurate.

Function graphs in this packet are generated by a computer and may not look exactly like the ones you draw. Remember, you are not a computer. The most important skill to develop is your ability to analyze key information about the graph and sketch a relatively accurate picture.

*Roman*

## 1.1

---

**A** Observe the following equation:  $2xy = 4$ .

- i. Does this equation represent  $y$  as a function of  $x$ ?

*Yes*

- ii. If so, write the domain of the equation as set, if not, provide an example where it fails as a function.

$\{x \mid x \in \mathbb{R} \text{ and } x \neq 0\}$

**B** Observe the set of ordered pairs

$\{(-3, 9), (1, 1), (3, 1), (0, 0), (-2, 4), (-3, 7), (4, 0)\}$

- i. Does the set of ordered pairs represent a function?

*No*

- ii. If so, write the domain as a set, if not, provide an example where it fails as a function.

$f(-3) = 9 = 7$

**C** Observe the following data table.

$x$	$y$
-3	3
-2	2
-1	1
0	0
1	1
2	2
3	3

- i. Does the given table represent  $y$  as a function of  $x$ ? Explain.

*Yes*

- ii. Write the domain of the table as a set.

$\{-3, -2, -1, 0, 1, 2, 3\}$

- iii. Write the range of the table as a set.

$\{0, 1, 2, 3\}$

D Observe the graph

- i. Does the graph represent a function? Explain.  
*Yes, passes vertical line test.*
- ii. Write the domain of the graph using interval notation.  
 $(-\infty, \infty)$
- iii. Write the range of the graph using interval notation.  
 $(0, 1]$

E Consider the function  $f$  as a mapping diagram shown:

- i. Write the domain of  $f$  as a set.  
 $\{-1, 0, 1, 2\}$
- ii. Write the range of  $f$  as a set.  
 $\{-3, 0, 4\}$
- iii. Find  $f(0)$  and solve  $f(x) = 0$ .  
 $f(0) = -3$  and  $f(x) = 0$  implies  $x = -1$  or  $x = 1$ .
- iv. Write  $f$  as a set of ordered pairs.  
 $\{(-1, 0), (0, -3), (1, 0), (2, 4)\}$

**F** Let  $g = \{(-1, 4), (0, 2), (2, 3), (3, 4)\}$

- i. Write the domain of  $g$  as a set.  
 $\{-1, 0, 2, 3\}$
- ii. Write the range of  $g$  as a set.  
 $\{2, 3, 4\}$
- iii. Find  $g(0)$  and solve  $g(x) = 0$ .  
 $g(0) = 2$  and  $g(x) = 0$  has no solution.
- iv. Create a mapping diagram for  $g$ .

## 1.2

---

A Graph the function  $h(t) = \frac{2}{3}t + \frac{1}{3}$ .

i. What is the slope?

$$\frac{2}{3}$$

ii. State the axis intercepts, if they exist.

$$\left(-\frac{1}{2}, 0\right), \left(0, \frac{1}{3}\right)$$

B Graph the function  $j(w) = \frac{1-w}{2}$

i. What is the slope?

$$-\frac{1}{2}$$

ii. State the axis intercepts, if they exist.

$$\left(0, \frac{1}{2}\right), (1, 0)$$

C Find the equation of the function that contains the points  $(1, 3)$  and  $(3, 2)$ .

D Graph the piecewise function  $f(x) = \begin{cases} 4 - x & \text{if } x \leq 3 \\ 2 & \text{if } x > 3 \end{cases}$

- i. Write the domain in interval notation.  
 $(-\infty, \infty)$
- ii. Write the range in interval notation.  
 $[1, \infty)$
- iii. State the axis intercepts, if they exist.  
 $(0, 4)$

**E** The unit step function is graphed below:

i. Write the equation  $U(t)$  of the unit step function.

$$U(t) = \begin{cases} 0 & \text{if } x < 0 \\ 1 & \text{if } x \geq 0 \end{cases}$$

ii. Write the domain of  $U(t)$

$$(-\infty, \infty)$$

iii. Write the range of  $U(t)$

$$\{0, 1\}$$

**F\*** Explain why the graph of a function  $f(x)$  must have at most one  $y$ -intercept.

Assume  $f(x)$  has more than one  $y$ -intercept. Draw a horizontal line on the  $y$ -axis, this line intersects the graph more than once, and thus it fails the vertical line test and is not a function.

### 1.3

---

A Graph the function  $g(t) = 3|t + 4| - 4$

- Write the domain of  $g(t)$  in interval notation.  
 $(-\infty, \infty)$
- Write the range of  $g(t)$  in interval notation.  
 $[-4, \infty)$
- State the axis intercepts, if they exist.  
 $(0, 8)$

B The graph of  $F(x)$  is shown below:

- Write piecewise function definition of  $F(x)$ .  
$$F(x) = \begin{cases} -2x - 5 & \text{if } x < -1 \\ 2x - 1 & \text{if } x \geq -1 \end{cases}$$
- State the domain of  $F(x)$ .  
 $(-\infty, \infty)$
- State the range of  $F(x)$ .  
 $[-3, \infty)$

**C** Graph the function  $g(x) = |t + 4| + |t - 2|$ .

- i. Write the domain of  $g(x)$  using interval notation.  
 $(-\infty, \infty)$
- ii. Write the range of  $g(x)$  using interval notation.  
 $[6, \infty)$
- iii. State axis intercepts, if they exist.  
 $(0, 6)$

**D** Solve the equation  $|3x - 2| = |2x + 7|$ .

- i. Write the solutions as a set.  
 $\{-1, 9\}$

**E** Given  $f(x) = |3x - 5|$  and  $g(x) = 4$

i. Graph  $f(x)$ .

ii. Graph  $g(x)$  (on the same plot).

iii. Solve  $f(x) \leq g(x)$ . Write your answer in interval notation.

$$\left[\frac{1}{3}, 3\right]$$

**F\*** Show that if  $d$  is a real number with  $d > 0$ , the solution to  $|x - a| < d$  is the interval:  $(a - d, a + d)$ . That is, an interval centered at  $a$  with 'radius'  $d$ .

*Proof.* From the definition of absolute value we know that the distance between  $x$  and  $a$  must be less than  $d$ , we can rephrase this with the relationship  $-d < x - a < d$ . Adding  $a$  to both sides we obtain  $-d + a < x < d + a$ . With some rearranging we obtain  $a - d < x < a + d$  which provides the solution interval  $(a - d, a + d)$  for  $x$ .  $\square$

## 1.4

---

A Let  $f(x) = x^2 - 2x - 8$

- i. Complete the square on  $f(x)$ .  
 $f(x) = (x - 1)^2 - 9$
- ii. Write the vertex.  
 $(1, -9)$
- iii. Find the axis intercepts.  
 $(-2, 0), (4, 0)$
- iv. Graph  $f(x)$ .

B Let  $h(t) = -3t^2 + 5t + 4$

- i. Compute the discriminant of  $h(t)$ . How many real zeros does  $h(t)$  have?  
 $72$ , this means the function has two positive real roots.
- ii. Find the zero(s) of  $h(t)$  if they exist, write your solutions as a set.  
 $\left\{ \frac{5 - \sqrt{73}}{6}, \frac{5 + \sqrt{73}}{6} \right\}$

C Let  $g(x) = x^2 - 3x + 9$

- i. Is  $g(x)$  factorable?  
*No*
- ii. If yes, write  $g(x)$  in factored form. If not, explain why.  
*The discriminant of  $g(x)$  is  $-27$ , which implies that the function has no real zeros. Therefore it is not factorable.*

D Solve the inequality  $3x^2 \leq 11x + 4$ , write your answer in interval notation.

$$\left[-\frac{1}{3}, 4\right]$$

E Solve the inequality  $5t + 4 \leq 3t^3$ , write your answer in interval notation.

$$\left(-\infty, \frac{5 - \sqrt{73}}{6}\right] \cup \left[\frac{5 + \sqrt{73}}{6}, \infty\right)$$

**F\*** Graph  $f(x) = |1 - x^2|$ .

## 2.1

---

**A** Let  $g(x) = 3x^5 - 2x^2 + x + 1$

- i. Identify the degree of  $g(x)$ .  
5
- ii. Identify the leading coefficient of  $g(x)$ .  
3
- iii. Identify the leading term of  $g(x)$ .  
 $3x^5$
- iv. Identify the constant term of  $g(x)$ .  
1
- v. Write the end behavior of  $g(x)$ .  
as  $x \rightarrow \infty, f(x) \rightarrow \infty$ , as  $x \rightarrow -\infty, f(x) \rightarrow -\infty$

**B** Let  $f(x) = 3(x + 2)^3 + 1$

- i. Write the parent function  $P(x)$  for  $f(x)$ .  
 $P(x) = x^3$
- ii. Pick three points from the parent function  $P(x)$  and apply the transformations of  $f(x)$  to write three points on the graph of  $f(x)$ .
- iii. Sketch the graph of  $f(x)$ .

- iv. State the domain and range of  $f(x)$  using interval notation.  
Domain and Range both  $(-\infty, \infty)$

**C** Let  $f(x) = 2 - 3(x - 1)^4$

i. Write the parent function  $P(x)$  for  $f(x)$ .

$$P(x) = x^4$$

ii. Pick three points from the parent function  $P(x)$  and apply the transformations of  $f(x)$  to write three points on the graph of  $f(x)$ .

iii. Sketch the graph of  $f(x)$ .

iv. State the domain and range of  $f(x)$  using interval notation.

$$\text{Domain: } (-\infty, \infty), \text{ Range: } (-\infty, 2]$$

**D** Let  $h(t) = t^2(t - 2)^2(t + 2)^2$

i. List all zeros of  $h(t)$  and their corresponding multiplicities.

$$t = -2_{m=2}, t = 0_{m=2}, t = 2_{m=2}$$

ii. Write the end behavior of  $h(t)$ .

$$\text{as } x \rightarrow \infty, f(x) \rightarrow \infty, \text{ as } x \rightarrow -\infty, f(x) \rightarrow \infty.$$

iii. Sketch a graph of the function  $h(t)$ .

**E** Let  $g(x) = (2x + 1)^2(x - 3)$

- i. List all zeros of  $g(x)$  and their corresponding multiplicities.  
 $x = -\frac{1}{2}_{m=2}, t = 3_{m=1}$
- ii. Write the end behavior of  $g(x)$ .  
as  $x \rightarrow \infty, f(x) \rightarrow \infty$ , as  $x \rightarrow -\infty, f(x) \rightarrow -\infty$ .
- iii. Sketch a graph of the function  $g(x)$ .

**F** Let  $f(x) = (x^2 + 1)(x - 1)$

- i. Determine analytically if  $f(x)$  is even, odd, or neither.  
**neither**
